

Stellar Phoenix Word Recovery

Stellar Phoenix Word Recovery 4.1 **Installation Guide**

Overview

'**Stellar Phoenix Word Recovery**' is designed to recover corrupted 'Microsoft Word' (.DOC, .DOCX) files. This software scans selected 'Word' documents and uses an advanced algorithm to restore 'Word' files back to their original state. The recovered files can either be saved at their original location on the hard disk, or at any user-specified location.

The software gives three types of recovery options to users- '**Simple Repair**', '**Advance Repair**', and '**Raw Recovery**'. The last two options are available only for .doc file while the first one can be applied on both .doc and .docx files.

User can preview 'Word' files in three different modes - '**Full document**', '**Filtered Text**', and '**Raw Text**'. 'Full document' view displays scanned file exactly as a 'Word' file opened in 'Microsoft Word'. 'Filtered text' shows only the text of the 'Word' file without formatting and other attributes of the content. 'Raw Text' shows machine-readable format of the file.

User can search for 'Word' files in folders and drives. You can save individual or all files. In addition, you can save files at the original location or at a location of your preference.
